

Denwood by HORN

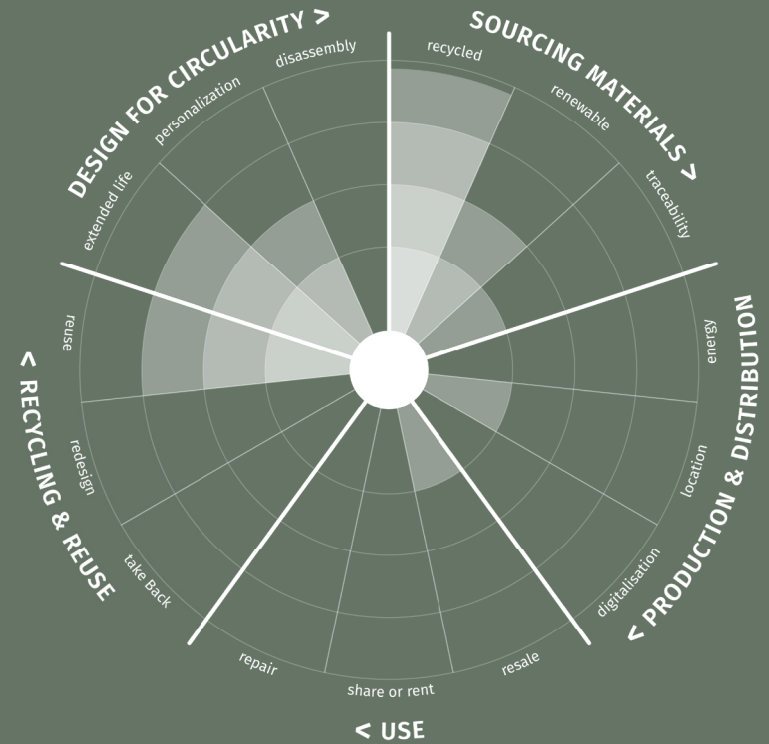

Denwood by HORN is upcycling residual products and waste and is very aware of its social responsibility. In cooperation with municipalities and job centres, they help people who, for various reasons, have a reduced working capacity to get their daily working life back on track.

How they work on circular economy

Denwood by HORN was founded in 2016 to start utilising waste material from HORNs countertop production facilities and design new home accessories from materials that used to be thrown away. All products are designed to be long lasting in both design and durability.

Today, Denwood by HORN designs products from various materials and sources, including recycled material from other companies than HORN, to ensure sufficient supply and help others minimise their waste. With Denwood by HORN, they aim to make the best use of the world's resources and help consumers change their consumption patterns and make a more sustainable choice.

DESIGN FOR CIRCULARITY

- > High quality materials and maintenance support
- > Customization offered B2B

SOURCING MATERIALS

- > Primarily surplus and recycled materials used
- > FSC certified wood used

PRODUCTION & DISTRIBUTION

- > Local production, sourcing in Europe

USE

- > Customers instructed about maintenance

RECYCLING & REUSE

- > Primarily surplus and recycled materials used
