GH Form

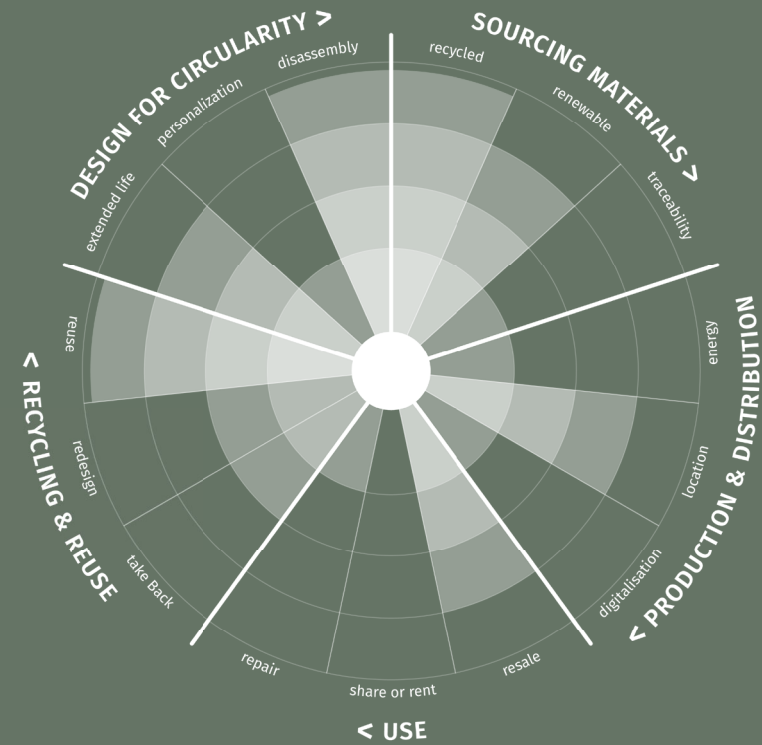

GH Form develops, produces, promotes and sells products for public spaces. Products have been developed in collaboration with Danish designers and architects. All products are made with a focus on how to avoid environmental impact.

How they work on circular economy

GH Form renovates and maintains Copenhagen benches for several Danish municipalities. The wood, which before was dismantled and has traditionally been thrown away, they now use as the primary material on the new Pocket Park series. The wood is cleaned and mounted on the product, and it is 100% recycled. In addition, the frame is made of steel and can be recycled as raw material for steel production.

GH Form develops products with extraordinary quality and lifetime. The sustainability of a product is in the design and in the use of materials. This design is created by designer Thomas E. Alken MDd/ Format design.

DESIGN FOR CIRCULARITY

- > Robust quality materials and changeable parts
- > Customized finish offered
- > Designed for full disassembly

SOURCING MATERIALS

- > Product made from recycled wood and other waste materials
- > Scandinavian wood used
- > All wood FSC certified
- > CO2 footprint on products

PRODUCTION & DISTRIBUTION

- > Products without packaging
- > Local production, nordic materials
- > 3D modeling and rendering

USE

- > Products are maintenance free and easy to repair

RECYCLING & REUSE

- > Take-back offered
- > Redesign and upgrade offered
- > Returned products renovated, resold or used for new products
