Paper Paste Living

The philosophy of Paper Paste Living is to create beautiful and functional home items in sustainable materials. All products are handcrafted in Spain and designed in Denmark by Hans Thyge & co. Paper Paste Living constantly searches for new methods and ways of working for a better planet.

How they work on circular economy

The core material is recycled paper; "we take something seen as waste and turn it into a functional home item. When making a mould, we always make it so that it provides us with several product possibilities. For example, the same mould provided four different objects in our first collection. Any leftovers during production are recycled into the subsequent batches.

The products are made by blending paper waste with water, pouring it into a mould and then compressing it. The paper comes from KMO recovery plants near our producer in Barcelona. We also use other materials than paper, like wood and cotton. In our pouf we used Italian regenerated cotton, and it gets its soft feeling from having coconut fibres with natural latex inside. All of the wooden parts are FSC certified and sourced locally in Europe, Radiata Pine and plywood are used.

PRODUCTION & DISTRIBUTION

- > Low energy manufacturing and drying
- > Regional production close to sourcing
- > 3D-rendering and prototypes

SOURCING MATERIALS

- > Recycled materials widely used
- > Primarily organic materials used
