

## Relife Studio

Relife Studio makes interiors from surplus materials, handmade and in cardboard and channel plastic. Relife Studio wants to create products from other peoples waste for the benefit of the environment. Therefore, Relife Studio works with a conscious approach to design and consumption with the already-produced resources.

### How they work on circular economy

Relife Studio's mission is to reuse and recycle waste and surplus materials, mainly cardboard and twin-wall plastic - resources that are often seen as waste. Relife Studio takes these resources back into an additional production cycle and uses them for new products - without adding too many new resources and materials. All products can be repaired and, if necessary, separated into pure resources before entering another life cycle. Relife Studio's products consist of cylindrical interior designs, from vases and pen holders to lamps in different sizes. Their design is timeless and follows no fast fashion trends.

#### DESIGN FOR CIRCULARITY

- > Easy to repair design
- > Possibility of using own recycled material
- > Products can be disassembled

#### SOURCING MATERIALS

- > Products made of waste and used materials

#### PRODUCTION & DISTRIBUTION

- > Production mainly by hand; used equipment and materials

- > Local production to minimize logistics

#### USE

- > Product sheet including maintenance and handling advice

#### RECYCLING & REUSE

- > Renewable design by changeable components
- > Products made of waste and used materials
