## Rosendahl Design Group A/S

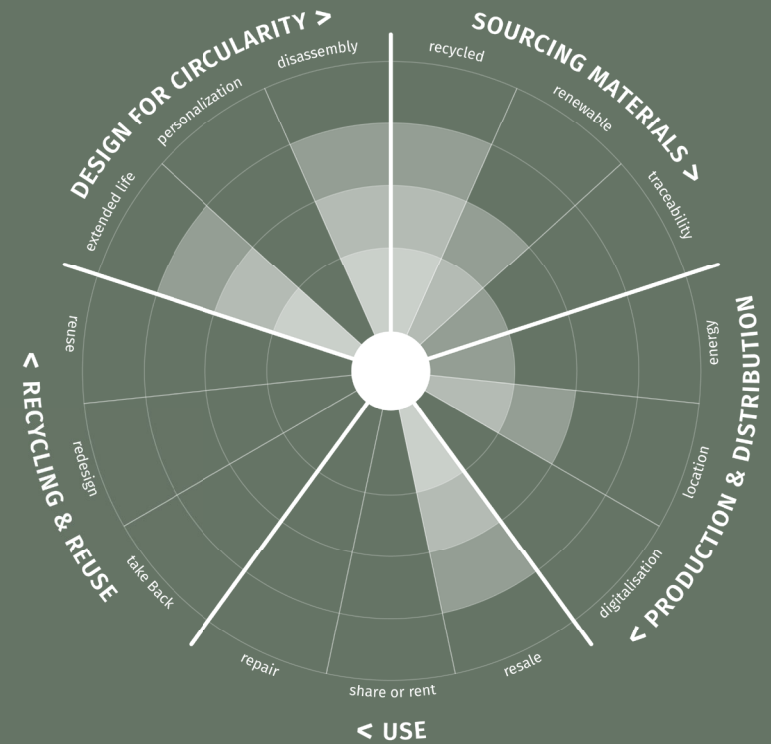

Rosendahl creates design that lasts. Built on simple aesthetics that balances form and function and the ambition of making high-quality design available to the many. The brand believes in true quality and excellent design paired with responsibility as the sensible choice for today and all future days.

### How they work on circular economy

Rosendahl constantly searches for new opportunities and solutions to reduce their footprint on the planet. Circular solutions influence the material sourcing, design and production when developing new products. In addition, Rosendahl works with recycled, bio-based and certified materials in their product development.

This year they introduce design classics in crystal-clear, 100% recycled glass with circularity integrated into all aspects of the product life cycle, being 100% recyclable. They are also introducing a picnic set including mugs, bowls and plates produced in Denmark in bio-based plastic, made with vegetable oil based on mass-balance principles. The series can be used again and again while also being 100% recyclable.

### DESIGN FOR CIRCULARITY

- > High quality and durable circular materials used
- > Products with two or more materials can be disassembled

### SOURCING MATERIALS

- > Recycled materials widely used
- > FSC certified wood
- > GOTS and GRS certified textiles
- > Bio-based plastic

### PRODUCTION & DISTRIBUTION

- > Renewable energy used and CO2 monitored
- > Local and regional production depending on sourcing

### USE

- > Products easy to repair and spare parts offered
