## SMALLrevolution

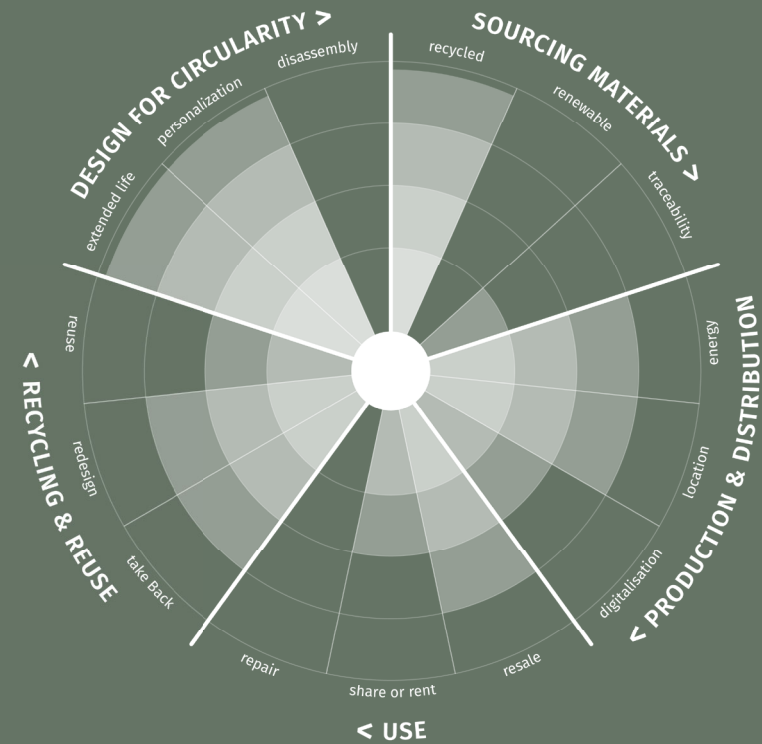

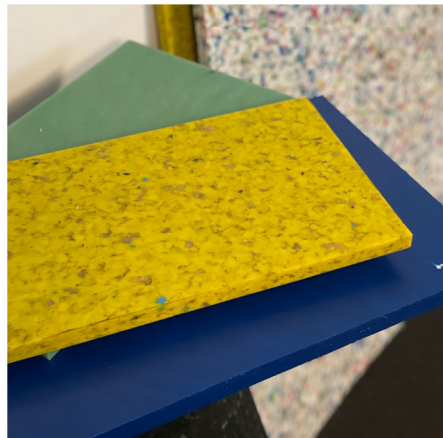

SMALLrevolution produces elegant and functional designs from recycled plastic waste. All products are one-material pieces and can be remoulded several times. The brand also does so-called circular co-labs with companies, transforming their plastic waste into functional, beautiful products.

### How they work on circular economy

SMALLrevolution gives life to plastic waste. All products are made from locally sourced plastic waste, either through so-called circular co-labs or through close partnerships with Danish waste managers.

What you see is what you get. Blue cosmetic containers make blue products and so on. All products can easily be remoulded since they are one-material and take no sorting. All their products can be recycled up to 6 times.

### DESIGN FOR CIRCULARITY

- > Robust products that can potentially last forever
- > Customization offered using client's waste

### SOURCING MATERIALS

- > All products made of recycled plastics
- > Origin of all materials documented

### PRODUCTION & DISTRIBUTION

- > Low-temperature molded plastics
- > Local production linked to material
- > 3D rendering and 3D printing

### USE

- > Broken products can be repaired or remolded
- > Rent out of some products

### RECYCLING & REUSE

- > Return-service for co-lab clients
- > Remolding and redesign offered
- > Returned products and specific materials reused
