## Stilleben Architects

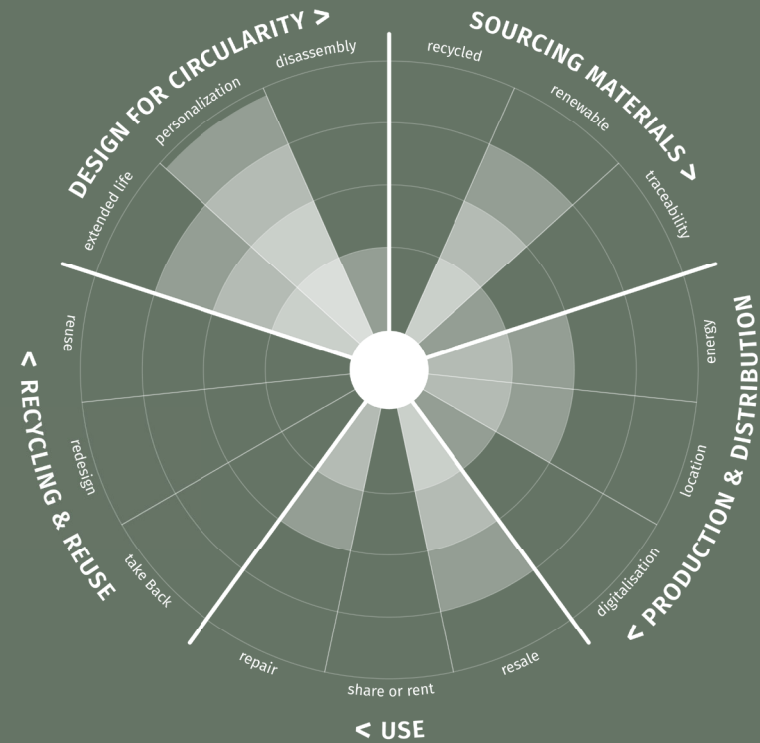

Stilleben Architects is a Danish architecture studio dedicated to the kitchen space. Through rational solutions and excellent craftsmanship, the firm creates kitchens and furniture that can last for generations, using sustainably sourced materials and production methods.

### How they work on circular economy

Stilleben Architects are actively working with initiatives that improve the sustainability of the products and production. As a result, Stilleben Architects has changed transportation which - due to preliminary calculations - has reduced the CO2 emissions from transportation to less than half by start of this year. The company are also working towards to be able to offer a full FSC certified production kitchen soon.

Stilleben Architects produces kitchens that are built to last and to be maintained. Their care kit provides essential tools for the maintenance of the kitchens. Their service packs will maximise the life expectancy and ensure that daily wear and tear will not result in any critical failure of components. Initiatives that are good for the environment, giving value to current and future owners and making resale or reuse possible.

### DESIGN FOR CIRCULARITY

- > Timeless design and adaption to the specific customer
- > Product is made to order
- > Product can to some extent be disassembled / reassembled

### SOURCING MATERIALS

- > Most wooden materials FSC certified
- > FSC certified materials and LCA in progress

### PRODUCTION & DISTRIBUTION

- > Waste minimization
- > Local / regional production
- > Automated CNC machine optimizing use of materials

### USE

- > Service kit and delivered service packs
