Thors Design

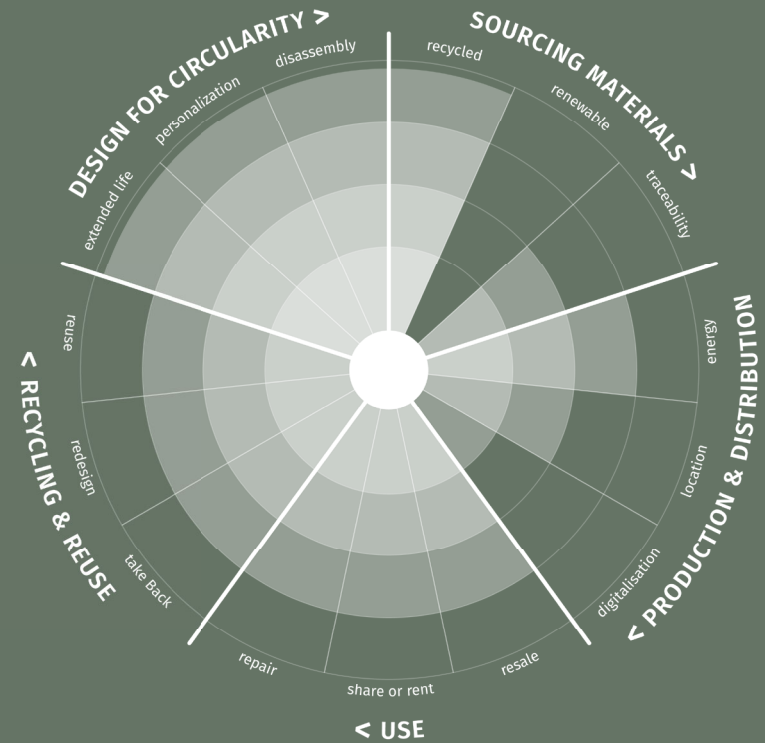

Thors Design creates unique, bespoke furniture made of reclaimed wood from decommissioned Danish wharves. Rustic furniture that creates atmosphere and soul to your design projects and has a story to tell.

How they work on circular economy

The fundamental idea of Thors Design is upcycling. Azobé wood from decommissioned Danish wharves is upcycled into exclusive designer furniture that can last for generations. Additionally, everything is handcrafted in Denmark, which keeps the energy level extremely low.

All wood is a waste product sourced from decommissioned Danish wharves. No material is wasted - all products are made to order, and cut ends are used for making oil lamps and tapas boards. The lifespan of the wood is exceptionally long due to its dense porosity. For the same reason, the need for maintenance is low. Their furniture can be repaired and redesigned if needed.

DESIGN FOR CIRCULARITY

- > Very durable and robust wood used
- > All products made to order
- > Simple in design and easy to disassemble

SOURCING MATERIALS

- > Main resource reclaimed wood
- > FSC recycled certified

PRODUCTION & DISTRIBUTION

- > Local production, made by hand, no packaging

- > Local production in DK
- > Digital design and rendering

USE

- > Maintenance, repair and product adaption offered
- > Longer rent outs offered
- > Buy-back offered + resale

RECYCLING & REUSE

- > Redesign offered
- > Cut ends etc. used for small products
