We Do Wood

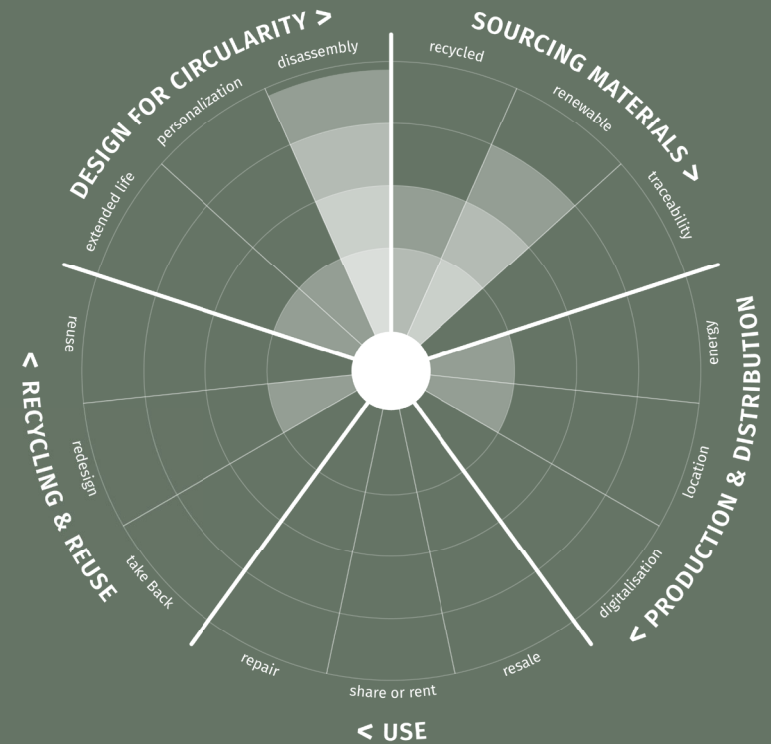

We Do Wood was founded in 2011 and designs and produces flat-packed furniture made of bamboo and FSC-certified wood. We Do Wood puts the circular economy into practice by using local manufacturers and only using residual and recyclable materials in the production.

How they work on circular economy

We Do Wood only use residual, recyclable and surplus materials, bamboo and FSC-certified wood in the production. All products are flat-packed to lower the CO2 emission and follow the cradle-to-cradle design approach. The manufacturer is locally situated, meeting the highest quality and social standards.

We Do Wood produced locally in Jutland, Denmark. All surplus materials are used in new products. "Laid Back" is produced from solid oak, from selected FSC European suppliers. "Circle" is made from residual wood from a local furniture manufacturer in Aarhus, with 100% recycled textile on top.

DESIGN FOR CIRCULARITY

- > 2nd grade and used products sold via resale platform
- > Customization offered on selected products
- > All product parts can be disassembled
- > Designed and tested for longevity

SOURCING MATERIALS

- > Products made by residual, surplus and recyclable materials
- > FSC certified materials only

PRODUCTION & DISTRIBUTION

- > Production uses renewable energy

- > Local production
- > Product flatpacked
- > 3D rendering

USE

- > Takeback and resale offered via partner
- > Rent-out possible via partner

RECYCLING & REUSE

- > Product upgrade and renewal offered for select products
- > Takeback materials used in new products
