Hansen Textile

Hansen Textile was established 1997 by Lotte & Henrik Hansen, and is now based in Odense, Denmark and Istanbul, Turkey. The company offers certified products as private label for fashion brands, sports and retail chains, hospitals and profile clothing and has few but close customer relations.

How they work on circular economy

Hansen Textile is working with recycled fibres in their products. As of now, they use 49% recycled cotton. The recycled input is OEKO-TEX 100 certified pre-consumer waste collected from external garment production.

Full traceability is a must. All textiles, even recycled textiles are labeled with OEKO-TEX 100 Standard.

Hansen Textile works in mono compositions for end of life recycling i.e. 70% organic cotton / 30% recycled cotton for tees and sweats. Mechanically recycled waste using zero chemicals, zero water and zero dye stuff greatly reducing the climate pressure. The calculations made by Hansen Textile are based on Higg Product Module 1.0 from Higg.org.
