Paper Paste Living

The philosophy of Paper Paste Living is to create beautiful and functional items in sustainable materials.

All products are handcrafted in Spain and designed in Denmark by Hans Thyge & co. Paper Paste Living constantly searches for new methods and ways of working for a better planet.

How they work on circular economy

Torsos, dress forms, visual merchandising tools and even whole mannequins made completely of paper paste, a material that consists entirely of water and paper, or PU prototypes. Only two examples of Paper Paste Living's ambition to work as environmentally friendly as possible.

An ongoing process towards more sustainable processes and products has always been part of the daily routine of Paper Paste Living and Pasqual Arnella. Thanks to high-quality surfaces, there are no limits to creativity and customization. High-end magnetic fittings and professional accessories for any area of application round off the green product range. Mannequins produced by partner Pasqual Arnella are sold through Penther GmbH.
